

VARIOUS-PURPOSE ROLLED PRODUCTS MANUFACTURED BY SECTION ROLLING MILL DEPARTMENT

Rolled products from hot-rolled steel 40S2 for manufacturing railway fasteners according to TU 1150-071-01124328-98

Rolled shapes for manufacturing rail track electric terminals according to TU 14-105-576-94

This TU covers hot-rolled shapes for manufacturing electric terminals of rail track fastening unit. The shape is made from steel grades St4ps, St4sp. Production of the shape from other steel grades may also be brought to a commercial level, if agreed upon with a customer.

Rolled products for cold extrusion according to TU 14-105-603-97

This TU covers the trial lot of hot-rolled products from steel grade 08.

Rolled products from spring carbon steel according to TU 14-105-608-97

This TU covers hot-rolled shapes intended for special trapezoidal cross-section articles from which double-coil spring washers are produced at local ChSPZ Company (metalware plant).

The hot-rolled shapes are made from steel grade 40S2 with chemical composition according to TU 1150-071-01124328-98.

Rolled products from weathering steel 14HGNDTs according to TU 14-105-629-99

This TU covers the delivery of a pilot lot of bar and shape rolled products. The lot volume is 1000 mt.
