

Severstal completes first delivery of large diameter pipes to Italy

PAO Severstal, one of the world's largest vertically integrated steel and mining companies, has supplied large diameter pipes (LDP) to Italy for the first time.

The X52/L360ME/S355J2H steel pipes were manufactured at Izhora Pipe Mill (IPM, part of the Russian Steel Division of PAO Severstal) and supplied to D'Amore & Lunardi S.p.A. for oil and gas projects in Italy.

The products have undergone triple certification, which will significantly increase the range of applications possible for these pipes.

Large diameter pipes produced by Izhora Pipe Mill located at the production site in Kolpino District of St. Petersburg were delivered to the customer by road transport.

Maxim Starikov, Deputy Director of Sales to the Energy sector for Severstal's export markets, said:

“Severstal has extensive experience in supplying large diameter pipes to Europe and is constantly expanding its supply geography. The delivery of LDPs to D'Amore & Lunardi S.p.A. will introduce Severstal's products to Italian clients, and we will continue to expand our presence on the Italian market. European customers appreciate our on-time delivery of LDPs and the advanced, customer-oriented service that we are constantly improving”.
